

## Roller Shutter

**All Roller Doors are made to suit the opening and constructed using aluminium laths. Therefore the doors will never corrode and maintenance required in minimal.**

### Fully automated roller shutters

#### Europa

The Europa concept merges all the advantages and conveniences of a powered operated rolling shutter. This exceptional yet pleasantly priced insulated roller door has been designed to improve on many of the virtues of traditional steel roller shutters. A 77mm x 20mm lath profile is the industries leading product in insulation and sound reduction. The tightly coiling nature of the door curtain allows you to achieve optimum drive through clearance ideal for people carriers and 4x4's. The handy pocket transmitter means you no longer need to leave the comfort of you car to open or close the door.

---

#### Europa Compact

For openings with limited headroom we offer the compact insulated power operated door with 55x14mm slats. The coil is smaller and tighter allowing headroom from as little as 205mm suitable for garages up to 2800mm wide.

---

#### SeceuroGlide Excel

The original insulated roller garage door. The first garage door tested and approved to police and insurance standards.

---

#### Manual Operated Roller Garage Door

Available to a maximum guide height of 2300mm and a maximum width of 3000mm. Insulated foam filled slots, secured by a key lock located at a convenient height and are fully CE compliant.
